The new generations of the FlexDevice product family

Goepingen, 30.03.2021: FlexDevice-L and FlexDevice-L² Revision 3 – now available

We constantly innovate our product portfolio on a regular basis. The **FlexDevice-L** as well as the **FlexDevice-L²** have been **redesigned**. The **Revision 3** device series **is now available**. **WiFi is included** with every Revision 3 FlexDevice-L and FlexDevie-L², as well as an externally accessible **microSD card slot** that is integrated to facilitate the rapid swapping of memory. Revision 1 devices are no longer up-to-date and have therefore already been removed from the supplier portfolio. From FlexConfig RBS 5.3 onwards, **support for the FlexDevice-L and FlexDevice-L² from Revision 1** will also therefore be discontinued. It is no longer possible to create or edit projects for this device revision.
