## FL3X DEVICE-L – THE MULTIFUNCTIONAL BUS CONTROL UNIT

FL3X Device-L is the high performance device of the FL3X Device product range, which is used and recognized by many car manufacturers and component suppliers in their automotive electronics development. The FL3X Device family provides manifold solutions for:

- gateways between different automotive bus systems
- bus interfaces
- remaining bus simulation
- signal manipulation
- data logging
- rapid prototyping

The multifunctional bus control unit FL3X Device-L supports the current and upcoming bus systems and has numerous variable interfaces, thus covering most of the application fields where bus interfaces are required. This device is appreciated by embedded software developers since it facilitates the implementation and testing of even very tricky gateway applications and prototyping functionalities.

Together with the comprehensive FL3X Config software family, the developers are enabled to set up and control their bus systems and ECU environment in a smart way.
